
ProVu™ Video Laryngoscope

Created with intuitive technology for plug-and-play use. Ready to use in seconds. The wipeable display with sterile, single-use handle and low-profile metal blade are designed for ease of use, reduced risk of cross-contamination, and patient safety.

Ideal for elective and unanticipated difficult airways

Difficult airways remain a challenge and unsuccessful management of the difficult airway is a main cause of complications in anesthesia. When intubating, either electively or facing an unanticipated difficult airway, it is recommended the products used are reliable and familiar.¹

ProVu Video Laryngoscope Macintosh blade is the same shape and profile of our popular BritePro Solo, providing reliability with the added advantage of video technology.

Apply familiar airway management techniques with confidence while sharing a better view with your team.

70° Screen Tilt

When space is restricted, the ProVu Display can be tilted, optimising your visual placement of the laryngoscope blade without changing your technique.

Plug and Go

ProVu Video Laryngoscope has an intuitive “plug and go” interface. Wake the display with one touch of a button. The responsive, text-free display is ready to go.

Single Use Safety

ProVu Video Laryngoscope blade and handle are single-use, which limits the handling of a contaminated device and reducing the risk of cross-infection.

The ProVu Display can be easily decontaminated using standard disinfectants, so the product is free from contamination and ready to use for the next patient.

Video technology has made intubation easier, but has it made it safer?

Laryngoscope handles are considered high risk as they are often contaminated with blood, indicating penetration of mucous membranes and are a potential source of cross contamination and Hospital Acquired Infections, placing both patients and staff at risk.^{2,3}

Current practices for decontamination and disinfection between patients can be ineffective, potentially leaving residual contamination that could be a source of cross-infection.²

ProVu Video Laryngoscope handles and blades are single-use, removing the need for decontamination.

More Available Space

At 12mm thickness, the ProVu Video Laryngoscope blade improves visualisation of the airway, and increases manoeuvrability and working space, reducing the risk of dental trauma.

Single-Use Safety

The ProVu video laryngoscope handle and blade is a single-use device, reducing the risk of cross-infection, reprocessing costs, time and storage.

Ultimate Confidence & Control

The ProVu single-use handle provides significant grip and comfort, with reduced height to facilitate difficult intubation particularly for situations with limited neck movement and obesity.

100% All Metal Blade

Specially engineered metal blade provides the confidence needed for direct and video laryngoscopy.

Screen Tilt

Achieve the optimal screen viewing angle for you and the team, improving efficiency and decision making.

Anti-Fog Design

The internally mounted Anti-Fog design reduces the need for warm up time and allows users to intubate quickly with a clear view.

PROVU VIDEO LARYNGOSCOPE

The future is in your hands

The ProVu Laryngoscope imaging system has a focal length, field of view and illumination field optimised for an improved view of the glottic anatomy. Combined with excellent colour rendition, blackout and blind-spot reduction technology, ProVu Video Laryngoscopes reduce the shadowing effect of an ET Tube when inserted into the upper airway.

Hyperangulated Blades

The shape, profile and angulation of the Hyper Blades provide a superior view of the glottic opening without having to align the oral, pharyngeal and laryngeal axis reducing the need for lifting pressure and potential for trauma to the patient. Ideal for difficult, anterior airways and patients with restricted neck movement.

ProVu™ Video Stylet

ProVu Video Stylet is a new generation intubation device, combining modern visualisation technology with a unique ETT guidance system, ideal for every type of intubation.

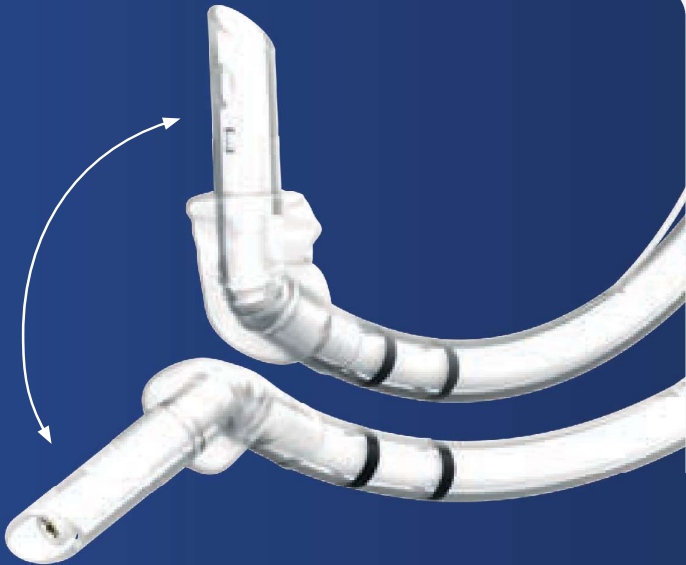

Get to where you need to go

ProVu VS overcomes the limitations of existing video intubation devices,
making navigating difficult airways effortless.

PROVU VIDEO STYLET

95° Range of Movement

Use the patented bi-directional control to flex or extend the manoeuvrable tip. The soft ET tube tip reduces possible trauma.

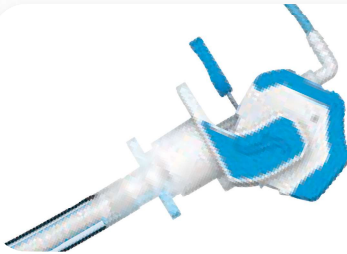

Direct Visualisation

No need for an X-Ray. Innovative visualisation of ProVu VS, shows ET tube passage all the way down to the carina.

Complete Visualisation

High-resolution camera technology with anti-fog coating, paired with a range of display sizes to suit your space.

Removable Malleable Rod

Remove malleable rod, for extra flexibility during nasotracheal intubation or intubating through a laryngeal mask

ProVu™ Video Displays

ProVu displays give a crystal clear, ultra high quality image. 8" or 3.5" display options provide flexibility to the clinical situation and setting.

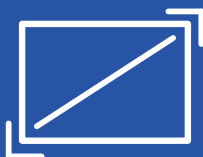

Make your first attempt your only attempt

Repeated attempts at intubation are known to be associated with patient morbidity¹ so it is important to get it right first time. ProVu Displays have been designed with leading anaesthetists to help achieve first time intubation success in both routine and difficult airway situations.

Battery Indicator

On screen battery indicator clearly displays amount of power left. Affording you safety in mind that you have enough power to complete your procedure.

Landscape Orientation

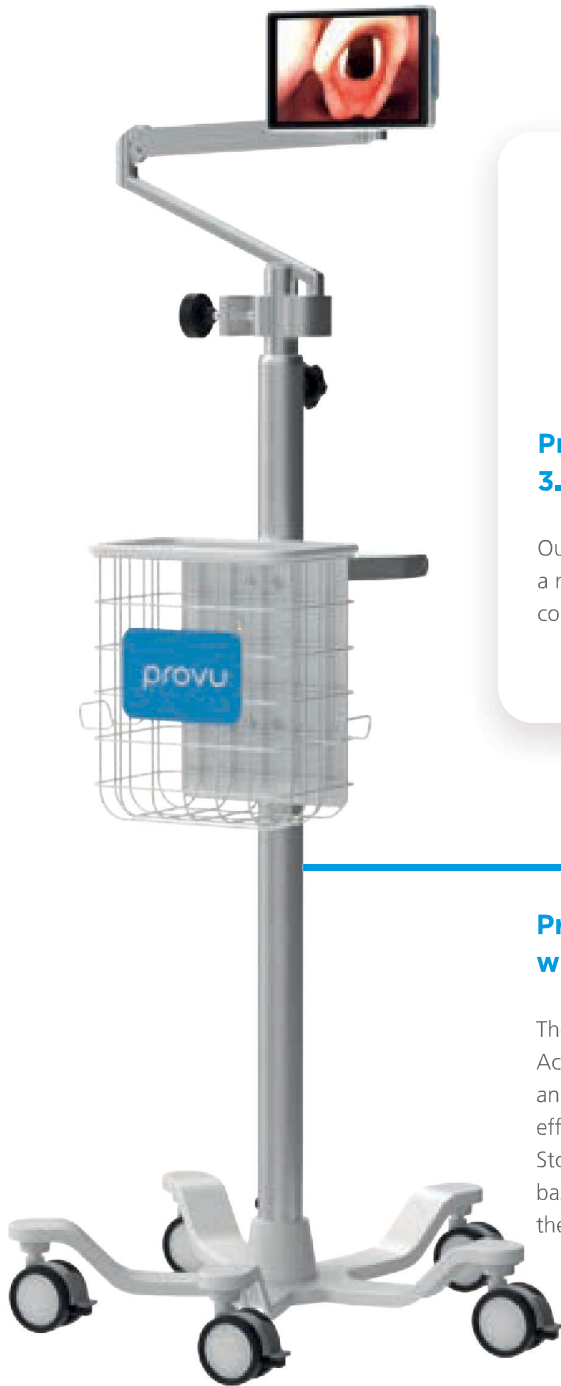

The landscape orientation of the display provides a wider view of the airway, allowing early visualisation of the ET Tube aiding accurate placement.

Reduce Contamination

ProVu Displays are wipeable so can be easily disinfected with standard and high level disinfectants. Reducing risk of cross-contamination and making it ready to use for the next patient.

¹ Consensus guidelines for managing the airway in patients with COVID-19 T. M. Cook, 1 K. El-Boghdady, 2 B. McGuire, 3 A. F. McNarry, 4 A. Patel 5 and A. Higgs 6.

ProVu 3.5" Display

Our 3.5" display allows for a minimum of 60 minutes of continuous use from a full charge.

ProVu 8" Display

Our 8" display allows up to 90 minutes of use via battery from a full charge, or can be plugged in for continuous use.

ProVu Pole Stand with Articulating Arm

The all in one intubation workstation. Achieve the optimal screen viewing angle for you and the team, improving efficiency and decision making. Storage for ProVu devices in the basket and charging capabilities on the pole.

ProVu Table Stand

An elegant and sleek design, with anti-slip base plate enables you to place the 8" display at the required height and angle.
